

Digital Disruption Comes to Healthcare

40%
Change or Die

\$1 Billion +

Digital transformation...the use of technology to radically improve performance or reach of companies.

Digital disruption is the change that occurs when new digital technologies and business models affect the value proposition of existing goods and services.

Digital Transformation...

But one thing we found was clear. The best companies — those we call Digirati — combine digital activity with strong leadership to turn technology into transformation. This is what we call Digital Maturity. Companies vary in their digital maturity, and those that are more mature outperform those that are not.

Big Data in Healthcare: Tapping New Insight to Save Lives

Healthcare is challenged by large amounts of data in motion that is diverse, unstructured and growing exponentially. Data constantly streams in through interconnected sensors, monitors and instruments in real-time faster than a physician or nurse can keep up.

The ability to analyze big data in motion in real-time as it streams in can help predict the onset of illness and respond instantly from new insight that will help transform healthcare.

Next Gen IoT? That informs about life-threatening conditions

Today's blog comes to us from ... where researchers at the Kaunas University of Technology, School of Biomedical Engineering are developing a bathroom scale that can detect life-threatening conditions.

In a news release, the researchers state that this scale will be able to not only monitor for such things as arteriosclerosis or cardiac arrhythmia, but ultimately 20 other parameters/conditions like hyperkalemia (elevated level of potassium in dialysis patients). Read more in this article on the KTU website: [Bathroom Scales Will Inform About Life Threatening Conditions.](#)
