whether you have a relatively new boat, your boat is 10 years old, or you're looking to upgrade, you'll want to make sure you're getting the most out of your investment. That's why we've put together a list of 10 things you should know about boat maintenance.

1. **Regular maintenance is key.** It's important to have a regular maintenance schedule for your boat. This includes checking the oil, water, and other fluids, as well as inspecting the engine, propeller, and other components. Regular maintenance can help prevent major problems and extend the life of your boat.

2. **Use the right products.** There are many products available for boat maintenance, but not all are created equal. It's important to use products that are specifically designed for boats and that are compatible with the materials on your boat. For example, using a wax that contains abrasives can damage the gel coat on your boat's hull.

3. **Protect your boat from the elements.** The sun, wind, and rain can all cause damage to your boat. To protect your boat from these elements, it's important to use a protective covering when the boat is not in use. This can be a tarp or a cover that is specifically designed for boats. Additionally, it's important to store your boat in a dry, shaded area when possible.

4. **Check the battery.** The battery is one of the most important components of your boat's electrical system. It's important to check the battery regularly to make sure it's properly charged and maintained. This includes checking the electrolyte level and the voltage. If the battery is not properly maintained, it can lead to starting problems and other electrical issues.

5. **Inspect the propeller.** The propeller is a critical component of your boat's propulsion system. It's important to inspect the propeller regularly to make sure it's free of damage and debris. A damaged propeller can cause the engine to overheat and can lead to other problems. Additionally, a propeller that is not properly balanced can cause the boat to vibrate and can lead to other issues.

6. **Check the fuel system.** The fuel system is another important component of your boat. It's important to check the fuel system regularly to make sure it's properly maintained. This includes checking the fuel filter, the fuel lines, and the carburetor. A clogged fuel filter or a leak in the fuel lines can lead to engine problems and can be a safety hazard.

7. **Use proper storage techniques.** When your boat is not in use, it's important to store it properly. This includes storing it in a dry, shaded area and using a protective covering. Additionally, it's important to make sure the boat is properly supported when it's out of the water. Using improper storage techniques can lead to damage to the boat's hull and other components.

8. **Keep your boat clean.** A clean boat is not only more enjoyable to use, but it's also easier to maintain. Regular cleaning can help prevent dirt and debris from building up on the boat's hull and other components. This can help prevent corrosion and other problems. Additionally, a clean boat is more likely to attract buyers if you decide to sell it.

9. **Invest in quality parts.** When it comes to boat maintenance, it's important to invest in quality parts. Cheap parts may seem like a good deal, but they can often lead to more problems in the long run. Investing in quality parts can help ensure that your boat is properly maintained and can extend its life.

10. **Consult a professional.** If you're not sure about a particular aspect of boat maintenance, it's always a good idea to consult a professional. A professional can provide you with the information you need to make the right decision and can help you avoid common mistakes. Additionally, a professional can perform maintenance tasks that you may not be able to do yourself.

By following these 10 tips, you can help ensure that your boat is properly maintained and that it lasts for many years to come. Regular maintenance is the key to a long and enjoyable boating experience.

Thompson's is now here to make sure you have the most enjoyable boating experience today or tomorrow in our new boat.

Patient Engagement: Blockbuster Drug Or Snake Oil?

"True patient engagement has metrics of demonstrable success, at scale, over time."

Learnings & Uses:

- Share success and failures
- Be open with best practices
- Collaborate with colleagues on patient engagement efforts
- Putting numbers around successful outcomes paves the way for change
- Best practices act as road maps for those just starting

Diagnoses	Continuum of engagement		
	Consultation	Involvement	Partnership and shared leadership
Direct care	Patients receive information about a diagnosis	Patients are involved about their preferences in the treatment plan	Treatment decisions are made between patients' preferences, medical evidence and clinical judgement
Regulated health design and governance	Organisations are responsible about their care experiences	Hospital involves patients as partners in delivery of care	Patients control hospital safety and quality improvement committees
Policy making	Public agency conducts focus groups with patients to ask opinion about a health care issue	Patients' recommendations about research priorities are taken into account by public agency to shape funding decisions	Patients have equal representation in agency committees that makes decisions about how to allocate resources to health programs

Factors influencing engagement:

- **Patient** (age, sex, education, race, health literacy, education)
- **Organisation** (policies and practices, culture)
- **Society** (social norms, representation, policy)

Each time we refresh the data is as engaging with this patient population. In this view, we can see that the cumulative total of patient visits is about a third of the total patients included.

The screenshot shows a software interface with a 'Patient Overview' section. The 'Patient Visits' chart is displayed, showing the number of visits for each patient. The Y-axis is labeled 'Visits' and ranges from 0 to 1,600. The X-axis is labeled 'Patient' and ranges from 1 to 25. The legend indicates three categories: 'Visits Patient (Open, Inpatient)' (pink bars), 'Visits Inpatient' (light blue bars), and 'Visits Patient (Inpatient)' (light red bars). The chart shows that for most patients, the number of visits is relatively low, with a few patients having significantly higher visit counts.

"Patient engagement is increasingly recognized as a core driver toward a high performance health system."
